

In the Specification at page 6, amend the paragraph beginning at line 21 as follows:

- -

[0032] The shower head may be grasped by its grip 9 and withdrawn from the holder normal to the plane of the paper in Fig. 5 or Fig. 2, preferably toward the wall, which is a direction of withdrawal (or introduction) along the direction of the grip, as shown by Figs. 1 and 2. If the jaws 14 (cf. also FIG. 4) have arched inner faces 16 at the central plane of the housing of the shower head 8, a certain latching of the shower head's housing in the holder will occur, without need for the shower head's housing having a shape that will allow recognizing that it is to be held in the holder at that location. When the shower head is withdrawn from the holder, there are no visible indications that it is intended for mounting on a shower-head holder.
